THE BEST TOOL FOR INSTALLING SNAP-IN SENSORS

Choose Cobra 2K

With the new Cobra 2K, technicians can install sensors correctly and quickly by pushing the sensor body and screw head without damaging the rubber valve stem or valve core.

Stop using traditional tool

Auto manufacturers report that 10–15% of snap-in valves will leak after installation even when proper procedures were followed. The traditional tool tears the rubber valve and you will not notice because the damage is so microscopic and is covered by the rim.

No worry about lost your sensor valve cap

Technicians lost valve cap frequently because using traditional tool.
